ABSTRACT OF THE DISCLOSURE

Please add the following Abstract of the Disclosure after the claims; also presented on a separate sheet attached hereto:

--

Process for manufacturing a laminate includes the application of a layer of polyamide to a substrate. The polyamide used is mainly branched polyamide that is at least composed of units derived from AB monomers that a) have both a carboxylic acid group and an amine group; b) at least one compound I, being a carboxylic acid (A_v) with functionality $v \ge 2$ or an amine (B_w) with functionality $v \ge 3$ or an amine (B_w) with functionality $v \ge 3$ or an amine (B_w) with functionality $v \ge 3$, with compound II being a carboxylic acid if compound I is an amine, or with compound II being an amine if compound I is a carboxylic acid. The substrate may be (metallized) paper or paperboard so that a laminate is formed which is very suitable for manufacturing packaging for foodstuffs.
